About the project •○

The problem

- While running, it's common to keep track of the **progress** using an application
- Many runners have found the interaction with such apps inconvenient, often requiring you to **physically touch** the screen
- To properly **check** the current information or to end the current session, **stopping** becomes almost mandatory

About the project ○●

The solution

- Using a **voice user interface** we can avoid the pitfalls of touch-based interface
- By using voice commands, users can keep their full attention on the activity **without interruptions**

Abstract

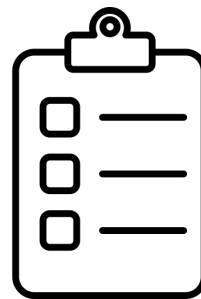

- › About the project
- › Tasks & Storyboard
- › Prototype
- › Application
- › Conclusion

Storyboard ●○○ Tasks

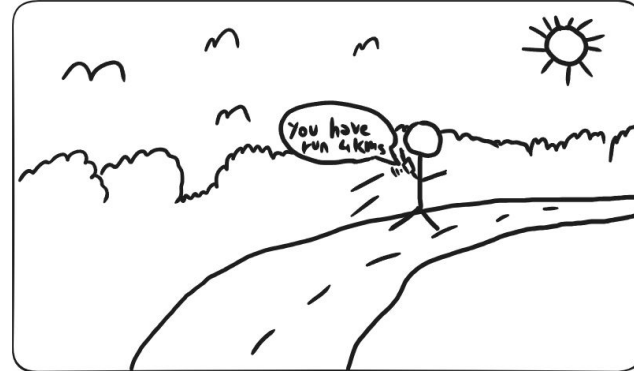

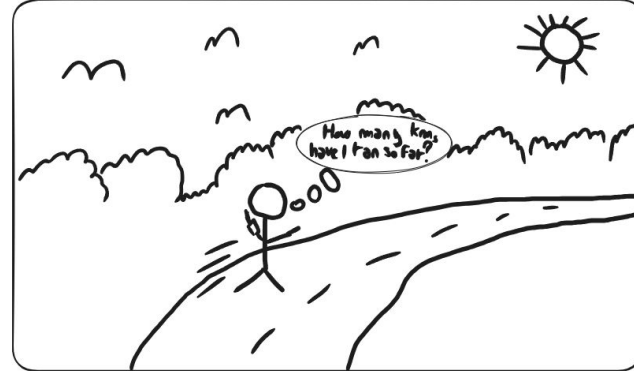

- The user wants to know:
 - their current **pace** mid-run
 - the current **distance** mid-run
 - the **time elapsed** since the beginning of the run
 - the **calories** burned during the run
- The user wants to view the **history** of their past runs
- The user wants to control the running session by **pausing**, **resuming**, or **stopping it**

Storyboard ○○○

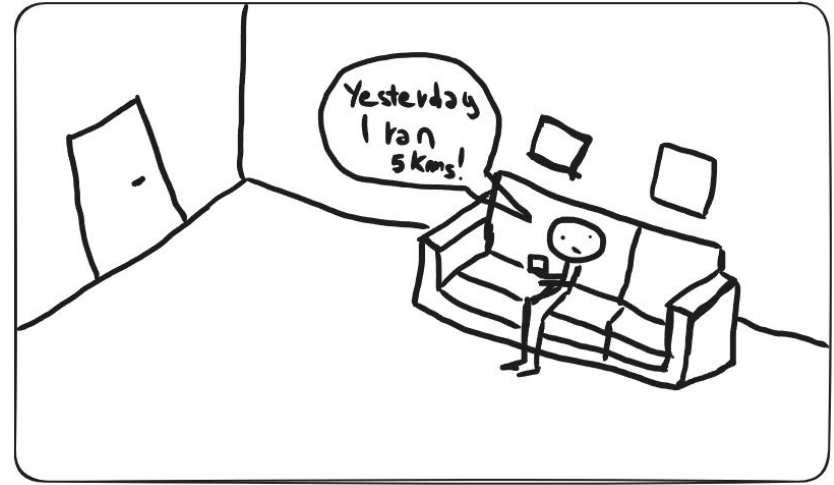

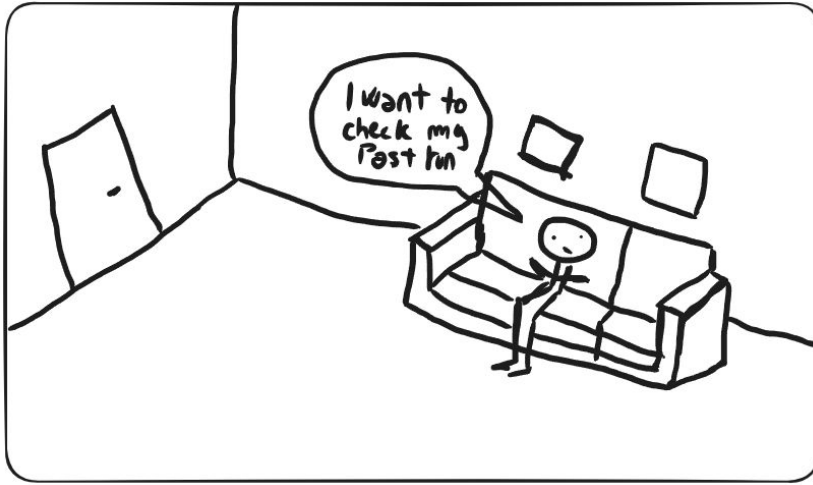

Storyboard - Vocal Interaction

Storyboard ○●●

Storyboard - Run History

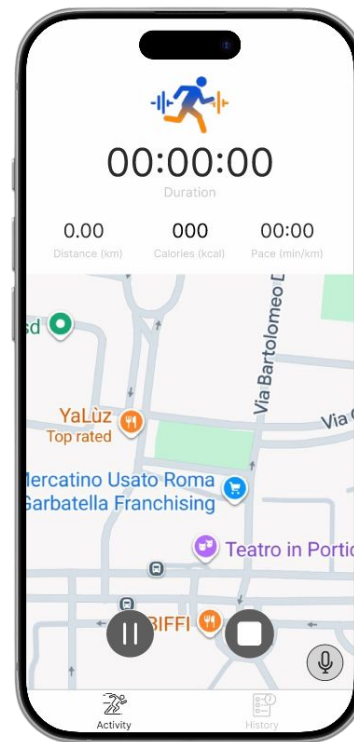

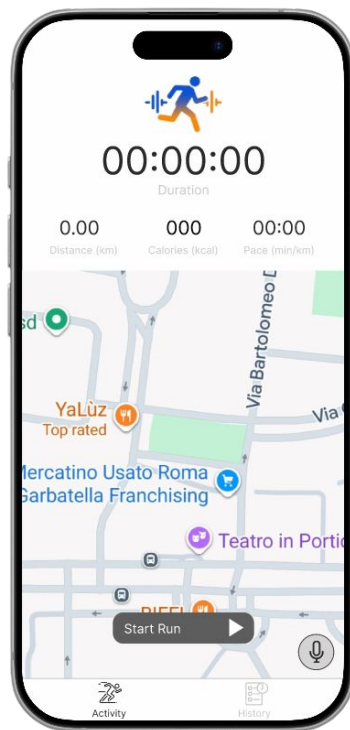

Abstract

Application ●○○○○○○○○○○

React Native & Expo

- The framework used to build our application is **React Native**
- We also used **Expo**, a **full-stack** framework to smoothen the development process of the app.
- Thanks to Expo it was possible to build the app for **both** Android and iOS.

Application ●○○○○○○○○○○○

Llama 3.1

- We used **Groq** for its fast inference time, while the actual language processing was handled by **Llama 3.1**

MODEL	REQUESTS PER MINUTE	REQUESTS PER DAY	TOKENS PER MINUTE	TOKENS PER DAY	ACTIONS
allam-2-7b	30	7K	6K	500K	
groq/compound	30	250	70K	No limit	
groq/compound-mini	30	250	70K	No limit	
<u>llama-3.1-8b-instant</u>	30	14.4K	6K	500K	
llama-3.3-70b-versatile	30	1K	12K	100K	
meta-llama/llama-4-scout-17b-16e-instruct	30	1K	30K	500K	
meta-llama/llama-prompt-guard-2-22m	30	14.4K	15K	500K	
meta-llama/llama-prompt-guard-2-86m	30	14.4K	15K	500K

 LLaMA

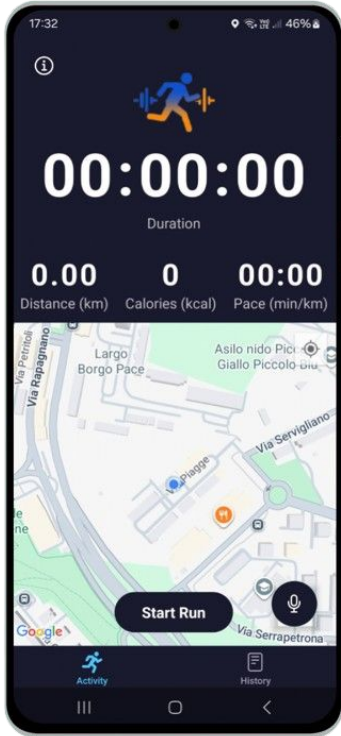

Application ○●○○○○○○○○○

App Structure

Application ○○○●○○○○○○○○○ Activity Tab

Start an activity, then **stop/resume** or **end** it

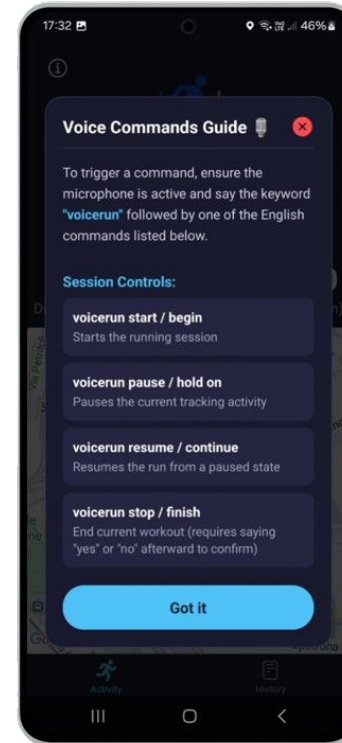

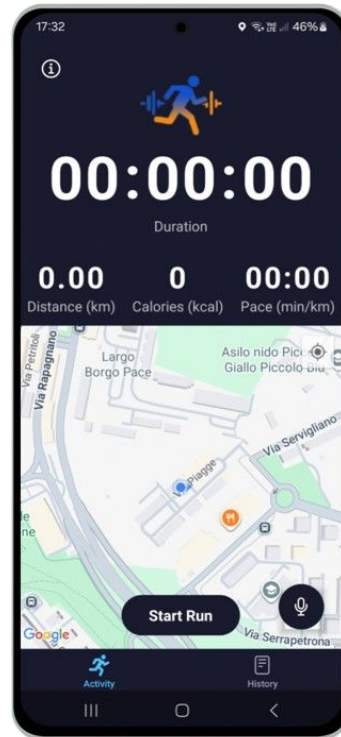

Ending an activity shows its **summary**

You can use vocal commands to make the app talk about requested information (**pace, km, time**, ecc...)

Application ○○○○●○○○○○○

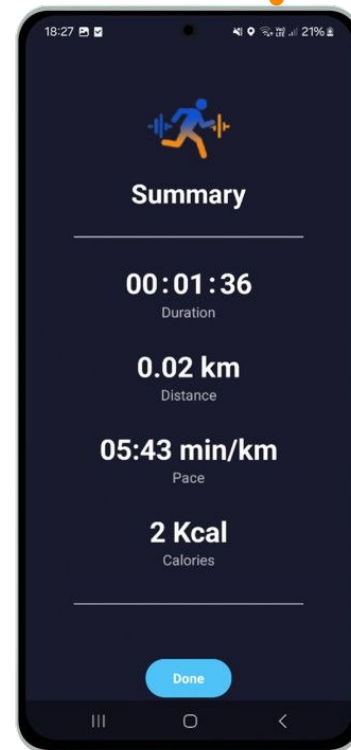

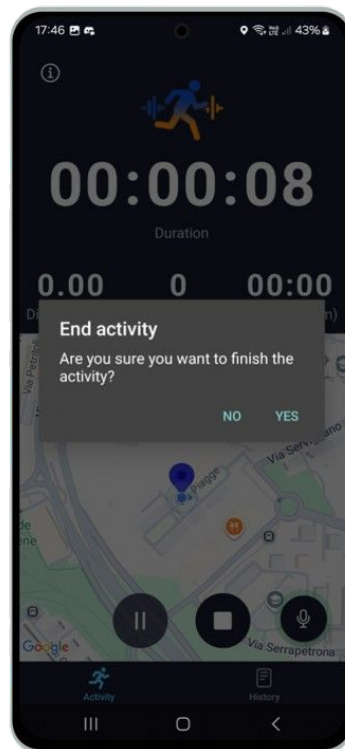

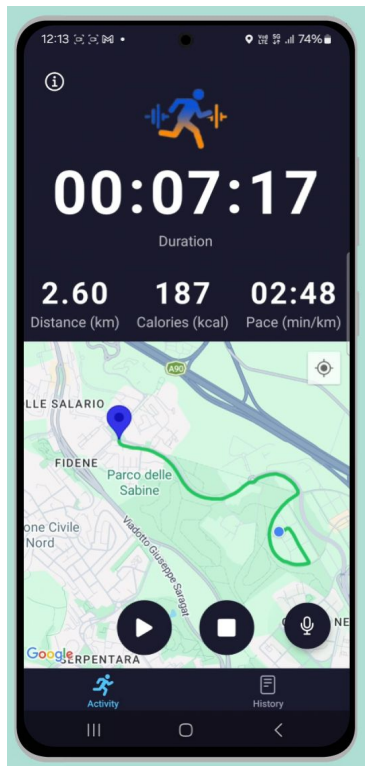

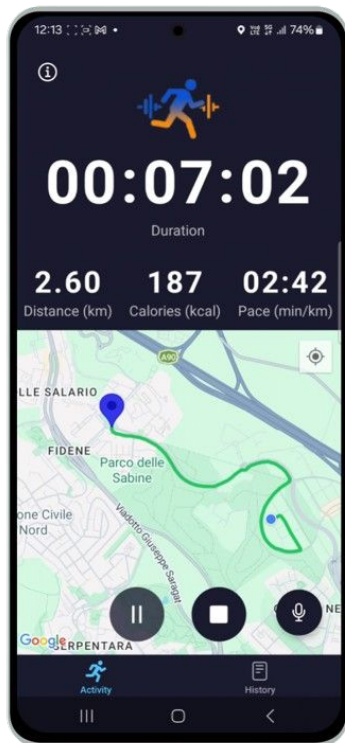

Activity Tab - Commands Guide

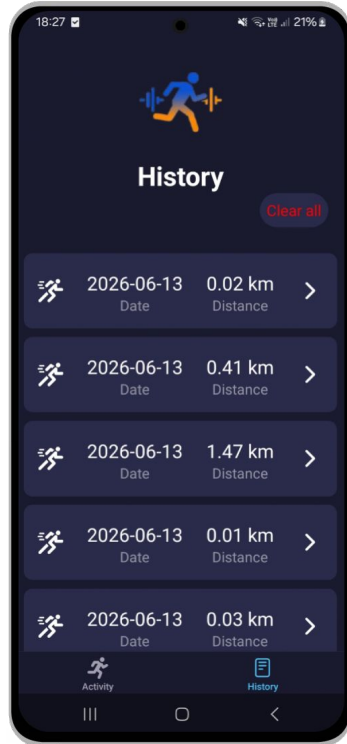

Application ○○○○○●○○○○○

Activity Tab - While Running

Application ○○○○○●○○○○○ History Tab

Check past runs

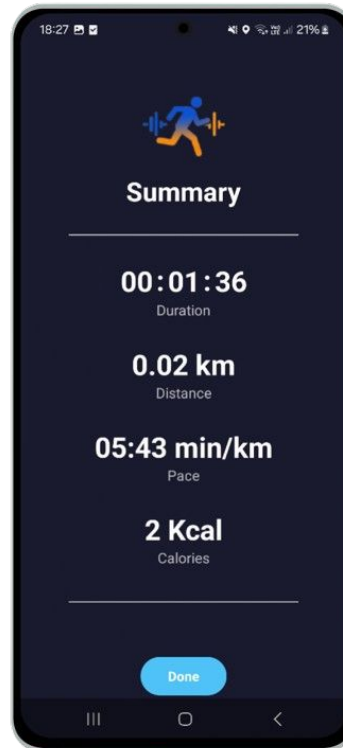

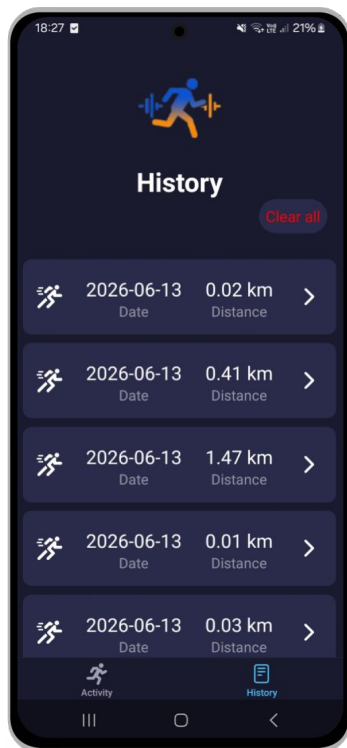

Click on a run to access its **summary**

Delete all runs

Application ○○○○○○●○○○

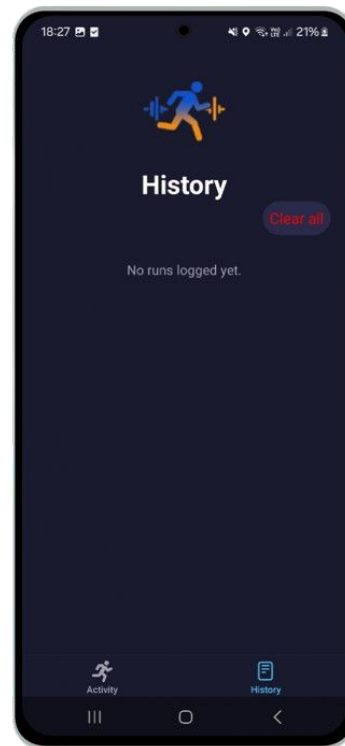

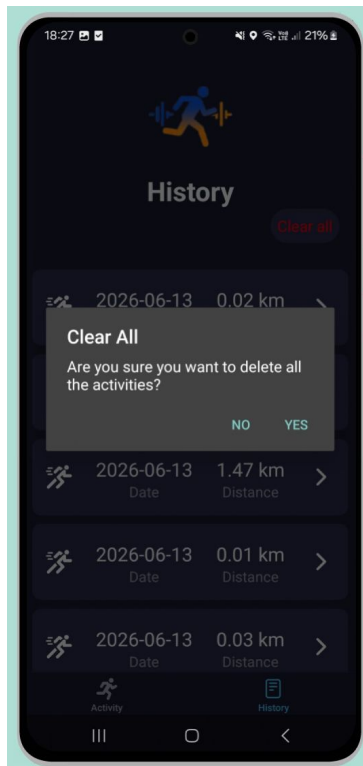

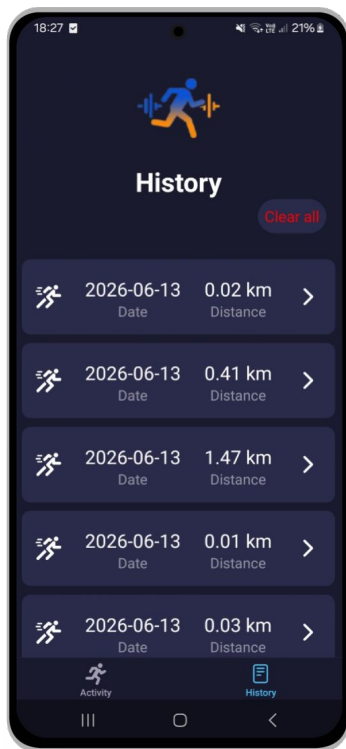

History Tab - Summary

Application ○○○○○○○●○○○

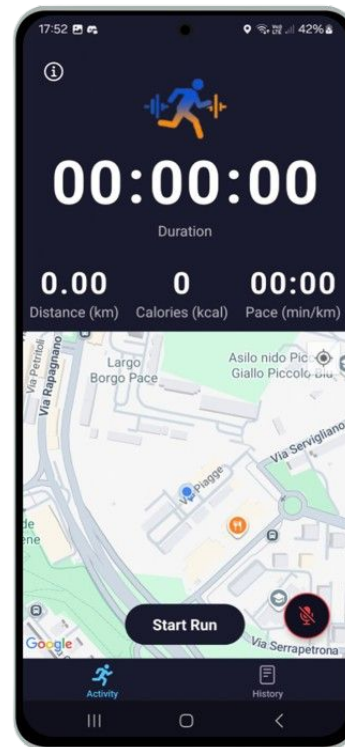

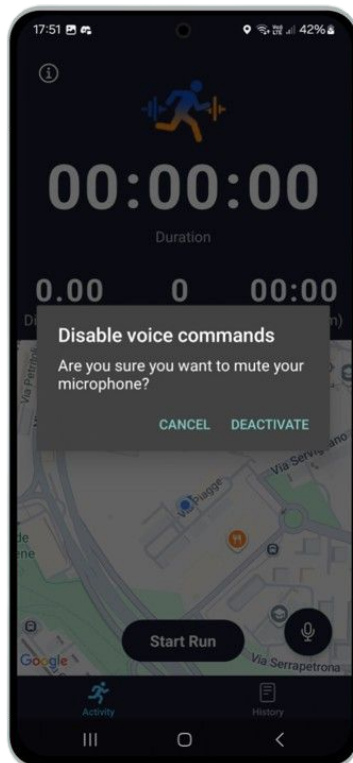

History Tab - Clear All

Application ○○○○○○○○●○○○

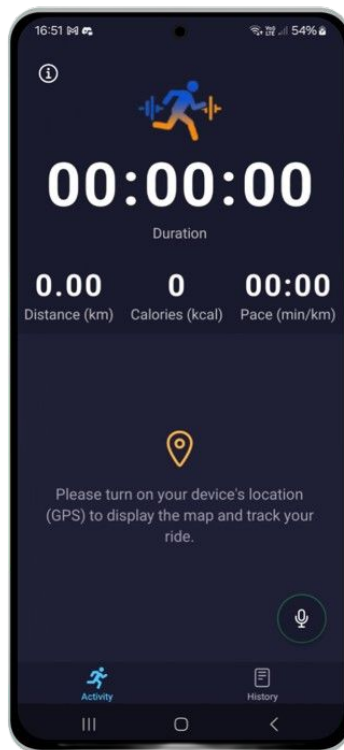

Edge Cases - Disable Microphone

Application ○○○○○○○○○●○

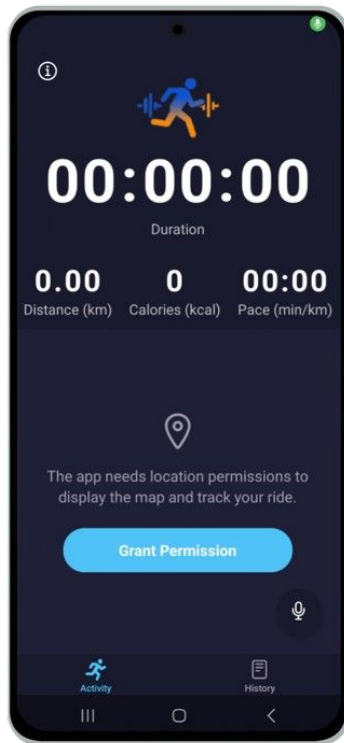

Edge Cases - Turn Off Location

Application ○○○○○○○○○○●

Edge Cases - Location Permissions

Abstract

- › Conclusion

Conclusion •

Thoughts and future developments

- VoiceRun performs its tasks **well**, allowing users to use their voice for interactions
- For possible future developments, **increasing the receptivity** and understanding of the vocal commands could lead to a **smoother user experience**
- Beyond that, using other paid models could allow the app to actually be distributed without having to worry about **tokens limit**

VoiceRun: Voice-Powered Running App

Thank you for the attention!
